

### STEP 1: HAND WASHING

Before installing one of our stickers, wash your hands thoroughly to avoid transferring dirt onto the product and the bike.

### STEP 2: CLEANING

To clean metal surfaces on the vehicle: use a liquid detergent used for cleaning windows and then degrease with **DENATURED ALCOHOL** (the pink one). To clean plastic surfaces on the vehicle: apply **DENATURED ALCOHOL** (the pink one) several times before application. Dry with a clean, dry cloth.

### STEP 3: APPLICATION

Position the sticker following the outline of the vehicle. Some of our stickers require the use of Application Tape, which is already attached to the sticker (a sheet of transparent adhesive film used to hold all the parts of the sticker in place).

### STEP 4: ASCIUGATURA

To make the adhesive easier to handle during installation, you can spray a small amount of water onto the application area. In this case, we recommend using a hairdryer to heat the adhesive once it has been installed and then remove any residual moisture. For better adhesion of the glue, we also recommend waiting at least 24 hours before exposing it to the elements or washing.
